

MOETION TECHNOLOGIES

YOUR IDEAS DESERVE TO MOVE FORWARD

It's hard to get bold product ideas off the ground, especially when there isn't enough engineering support. We design electronics to get new ideas in motion so you can accomplish what was impossible.

ELECTRONICS R&D

Engineering support for early stage concept development and feasibility. When you need to quickly show the value of a new technology, lean on us to get it done without blowing your budget.

- Feasibility research
- Technology research
- Proof of Concept
- Prototyping

PRODUCT DEVELOPMENT

Experienced engineering to move your product development forward. We can deliver custom PCBs and software for new products, and process development training for teams that want to streamline the designs they already have.

- PCB design and testing
- Embedded software and full stack IoT
- Wireless power and induction cooking
- Process development
- QMS implementation

TEST AUTOMATION

Building and maintaining test systems can be resource intensive. Leverage our experience to create and maintain custom test systems for product durability, life cycle analysis, and overstress.

- Life cycle testers
- Labview, C, C++
- Python programming
- Industry agnostic
- Electromechanical and hydraulic systems

ENGINEERING OUGHT TO SOLVE PROBLEMS, NOT BE THE PROBLEM

Moetion Technologies provides nimble and reliable engineering solutions so that your ideas get moving again.
